Background Information

Every year, there is a growth in healthcare expenditures in the United States. In 2008, spending on healthcare amounted to 15.2% of the economy, the largest of any developed country. Bringing healthcare costs under control is a major concern for government and industry alike.

Problem Statement

In this project, students will explore the change in national healthcare expenditures based on different growth rates. The generated values will be compared with statistics from U.S. Census Bureau.

Instructions

IMPORTANT: This is not the actual Exam for your section. You will not receive any credit for completing this project.

IMPORTANT: Complete the steps below in the order they are given. Completing the steps out of order may complicate the assignment or result in an incorrect result.

1. Download and extract the provided Data Files ZIP file. It contains the following file for use in this assignment:
   a. expenditures.csv – Information on healthcare expenditures in the United States from 1975 to 2015 [1], [2].

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Year</td>
<td>Number</td>
<td>Year for the statistics.</td>
</tr>
<tr>
<td>Expenditures</td>
<td>Currency</td>
<td>Total healthcare spending in the United States.</td>
</tr>
<tr>
<td>7.0% Rate</td>
<td>Currency</td>
<td>Healthcare expenditures with 7.0% annual growth.</td>
</tr>
<tr>
<td>7.5% Rate</td>
<td>Currency</td>
<td>Healthcare expenditures with 7.5% annual growth.</td>
</tr>
<tr>
<td>8.0% Rate</td>
<td>Currency</td>
<td>Healthcare expenditures with 8.0% annual growth.</td>
</tr>
<tr>
<td>8.5% Rate</td>
<td>Currency</td>
<td>Healthcare expenditures with 8.5% annual growth.</td>
</tr>
<tr>
<td>9.0% Rate</td>
<td>Currency</td>
<td>Healthcare expenditures with 9.0% annual growth.</td>
</tr>
<tr>

</tbody>
</table>
2. Create a new Microsoft Excel workbook named `lastname_firstname_er1_nhp.xlsx`.

3. We must adjust the sheets in our workbook.
   a. Rename Sheet1 to Expenditures.
   b. Add a new sheet named Analysis Questions.

4. Import the following item into the workbook:

5. We wish to apply formatting to the Expenditures sheet.
   a. We must setup a table to store data on healthcare expenditures.
      i. If a table does not already exist in cells A4 through K45, create one using a style of your choice. The table has headers and will overlap external data ranges. If prompted, convert the selection to a table and remove all external connections.
      ii. If a table already exists in cells A4 through K45, format the table using a style of your choice other than the default table style.
   b. For the table, turn on the Total Row option.
   c. Enter text in the cells as indicated below:
      i. A1: Healthcare Expenditures
      ii. A3: Annual Growth Rate:
      iii. C3: 7.0%
      iv. D3: 7.5%
      v. E3: 8.0%
      vi. F3: 8.5%
      vii. G3: 9.0%
      viii. A46: Average
   e. Merge (but not center) cells A3 through B3.
   f. Apply the Title cell style to cell A1.

6. We need to perform calculations to analyze the Expenditures sheet.
   a. We would like to summarize the expenditures and projections.
      i. In the total row, individually average columns B through G.
ii. In the total row, do not display any statistics in columns H through K.

7. On the Expenditures sheet, we wish to calculate healthcare expenditure estimates with different assumptions about the carrying capacity and growth rate.

   a. We want to estimate future healthcare expenditure values.
      i. Enter the formula into the cell as indicated below.

         **HINT:** To avoid errors, copy-and-paste the provided formula.

         (1) \( C6: = C5 \times (1+C3)^{(A6-A5)} \)

   ii. We must adjust the future values formula so its cell references are correct when the formula is copied.

      In cell \( C6 \), modify the cell references so they are column-absolute mixed, row-absolute mixed, or relative references as indicated:

      \[ C6: = C5 \times (1+C3)^{(A6-A5)} \]

      Make these **row-absolute mixed** references
      Make these **column-absolute mixed** references
      Keep these relative references

   iii. We will now AutoFill the modified formula. Enter the formula into the cells as indicated below:

      (1) \( C6 \) through \( G45 \): AutoFill the formula from cell \( C6 \).

   b. In column H, write a formula that, for each year, uses a function to find the average of the projected healthcare expenditures. Compare each year’s projections from columns C through G.

   c. In column I, write a formula that, for each year, uses a function to find the highest of the projected healthcare expenditures. Compare each year’s projections from columns C through G.

   d. In column J, write a formula that, for each year, uses a function to find the lowest of the projected healthcare expenditures. Compare each year’s projections from columns C through G.
e. In column K, calculate the healthcare expenditures class by nesting IF() functions to display a class according to the following rules:
   i. Class of A if the average of projected healthcare expenditures was more than $2,000,000,000,000.
   ii. Class of B if the average of projected healthcare expenditures was between $1,000,000,000,000 and $2,000,000,000,000.
   iii. Class of C if the average of projected healthcare expenditures was less than $1,000,000,000,000.

8. We must apply additional formatting to the Expenditures sheet.
   a. Format the cells as indicated below:
      i. B5 through J46: currency with no decimal places
   b. AutoFit the widths of columns A through K.
   c. Apply the Green-Yellow-Red color scale conditional formatting option to cells B5 through G45.

9. We would like to create a chart to plot the healthcare expenditure over time.
   a. Create a 2-D line chart based on cells A4 through B45 of the Expenditures sheet. Move the chart to a new sheet named Expenditures Chart.

      Ensure that the years are shown as labels for the horizontal (category) axis, not plotted as chart data. Specify appropriate chart and axis titles.
   b. Add a trendline based on the average healthcare expenditures. Use the trendline type that best fits the data and project the values forward 20 periods (through the year 2035). Display the R-squared value on the chart.

      NOTE: You cannot use the Moving Average type for your trendline.

10. To better understand our data, we wish to create a PivotTable.
   a. Create a new PivotTable based on the data in cells A4 through K45 of the Expenditures sheet. Place the PivotTable on a new sheet named Expenditures PivotTable.
   b. On the PivotTable do the following:
      i. Add the year as a Rows field.
      ii. Add the expenditures as a Values field.
c. We need to perform formatting on our PivotTable.
   i. Group the years into sets of 10 starting at 1975.
   ii. Summarize the expenditures by averaging them.
   iii. Format the cells as indicated below:
       (1) **Average of Expenditures** field: currency with no decimal places

11. We need to setup the *Analysis Questions* sheet so that it can store responses to the analysis questions.
   a. Enter text in the cells as indicated below:
      i. **A1**: Question Number
      ii. **B1**: Response
   b. Bold the contents of row 1.
   c. AutoFit the width of column **A**. Set the width of column **B** to 100 (8.39”).
   d. Set the height for rows 2 through 5 to 110 (1.53”).
   e. Change the vertical alignment setting for columns **A** and **B** so that the text is displayed at the top of each row.
   f. Turn on text wrapping for column **B**.

12. Starting in row 2 of the *Analysis Questions* sheet, answer four of the five analysis questions below. Respond to one question per row.
   a. Which trendline type did you use on *Expenditures Chart*? Why did you choose this type of trendline?
   b. There is a continuous increase in annual healthcare expenditures. What do you think is the main reason behind this?
   c. The annual growth rate for healthcare costs has slowed in recent years. The average annual increase from 1975 to 1985 was 12.8% but was only 5.0% from 2005 to 2015. Explain some potential reasons for this slowed growth rate.
   d. Home healthcare experienced the greatest growth of all healthcare spending areas, with 2009 spending being almost 36 times the amount spent in 1979 [1]. What is a possible cause for this drastic upsurge?
   e. In 2009, prescriptions accounted for 12% of total healthcare spending. This is more than double the 5.7% figure of 1979 [1]. What is a possible reason for this increase?
Grading Rubric

This is a practice assignment and is worth no points. A comparable Exam would be worth 100 points and graded using this rubric, with partial credit awarded as appropriate:

<table>
<thead>
<tr>
<th>Steps 3a-b</th>
<th>3 points total</th>
<th>Steps 8a-c</th>
<th>6 points total</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>5 points</td>
<td>Step 9a</td>
<td>6 points</td>
</tr>
<tr>
<td>Step 4</td>
<td></td>
<td>Step 9b</td>
<td>4.5 points</td>
</tr>
<tr>
<td>Steps 5a-f</td>
<td>8 points total</td>
<td>Steps 10a-c</td>
<td>7.5 points total</td>
</tr>
<tr>
<td></td>
<td>5 points</td>
<td>Steps 11a-f</td>
<td>5 points total</td>
</tr>
<tr>
<td>Step 6a</td>
<td>5 points</td>
<td>Steps 12a-e (pick 4 of 5)</td>
<td>5 points total</td>
</tr>
<tr>
<td>Step 7a</td>
<td>15 points</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Steps 7b-e</td>
<td>15 points total</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The analysis questions in Steps 12a-e can be evaluated using this rubric:

<table>
<thead>
<tr>
<th>Standard</th>
<th>Meets Requirements (2.5 points)</th>
<th>Does Not Meet Requirements (0 points)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Answer is reasonable.</td>
<td>Answer addresses the question prompt and is factually correct or a reasonable interpretation of available data.</td>
<td>Answer does not address the question prompt, is factually incorrect, or is an unreasonable interpretation of available data.</td>
</tr>
<tr>
<td>Answer is supported.</td>
<td>Logical rationale is provided to support the given answer.</td>
<td>Logical rationale is not provided to support the given answer.</td>
</tr>
</tbody>
</table>
